

25 September 2008

Aims: / Objectives:

1. Review of GP Curriculum of Neurology
2. Review of differential diagnosis and management headache in Primary Care
3. Differential diagnosis and management of tremor in Primary Care.
4. Differential diagnosis and management of numbness/weakness in Primary Care.

Comments / Feedback

Good overview of Parkinson's and neuropathies. Video was interesting. Needs more information on management of headaches.

Good topic well covered. Cheers.

The video was excellent – shame we did not get to see it earlier.

Good overview.

Headaches – possibly not enough practical input.

Neuropathy – bit too much detail but useful.

Parkinsons Disease- excellent

Review of GP curriculum of Neurology was very good – a handout would have been helpful.

R/V of Differential Diagnoses and management of headache in 1^o care – summarized very quickly.

All information was there but a recap of main points may have been helpful. Also DD's were not really touched upon.

Tremor component was very good. Easily understood and followed.

Numbness/weakness too much was covered really. A summarising table may have been helpful.
