

14 February 2008

## Aims / Objectives:

Revision examination of the shoulder, knee and back  
Review of common pathologies  
Brief discussion with regard to management  
Practice makes perfect!

## Comments / Feedback

Good to review joints and pathology  
Very useful examination techniques – need more specific examples.  
Very good presentations- good use of interaction – good for GP – very good small group.  
Excellent  
Very good – bit more information on the actual pathologies would be better.  
Clear explanation of joint examinations.  
Useful and relevant to day to day work.  
All very useful joints chosen to focus on. Enjoyable presentation methods and good practice session.  
Really good presentation and good practical advice. Good to practise the examinations.  
Good presentations – very informative. Good GP based presentations.  
Very good especially showing examinations.  
Shoulder, back, knee – overall very useful – probably a little to much information on shoulders.  
Very interesting.  
Excellent teaching – loved the practical bits.  
Good joints examinations – video presentation.  
Sorry missed some of presentation. Practising examinations very useful. Watching videos very useful.  
Very good presentation, clear relevant. Useful video session – interesting and helpful.  
Enjoyed joint examination talk, but shoulder examination was a bit too in depth.  
Brilliant.  
Excellent session. Quick useful to get practical/hands on experience. Small groups – video session was good.  
Very good.  
On the whole good but shoulder examination far too detailed. I think a more GP orientated approach would have been more useful.  
Useful – I think the shoulder needed to be sub-divided as there was so much information.
