

Worcester VTS - Evaluation Form

GPR, SHO Inn
or SHO
(please circle)

10 January 2008

Aims

1. To improve knowledge of common eye conditions

Objectives:

1. To review the anatomy and examination of the eye
2. To be able to manage common eye conditions

Aims

1. To understand more about patients self management

Objectives

1. To obtain some strategies and consultation techniques to help patients manage their medical conditions.
2. To begin to undertake some evidence based work about the benefits of self management for chronic medical conditions.

Session 1 Good presentation, useful case studies, would have been good to have a brief handout with a summary.

Session 2 Good handout a Tompkins report. Good choice to reflect on patients and cases.

Really ?.... option and talk.

Very useful – simple, relevant. Good power point, use of case presentations. Prefer open group discussions rather than small group discussion. Allows for more debate.

I really enjoyed today. The eye condition presentation was really useful in practice and considering new guidelines and evidence was enlightening.

Very useful, would be good next year to have ophthalmology consultant/SpR doing presentation.

Our presentation – difficult to comment.

Very good eye presentation. Good use of pictures and case studies. Good to interact with whole group. Good intro to idea of patient self management.

Good use of pictures. Good hot topic.

Good informative about eyes, brief on point self management – about enough.

Good to go over anatomy. Good to go through DD of red eye.

Very good.

Really useful. I learnt a lot.

Very good session. Should have concentrated on referred types – emergency, routine.

Good variety of eye cases. Good anatomy talk. Good hot topic from Kathryn – well presented, salient points well made. Tompkins report – practically useful in SP. Relevant. Stimulates discussion.

Ophthalmology presentation. Excellent – well done.

Very useful good overview.

Excellent presentation. Very good anatomy revision.

Very good presentation on eyes. Very relevant. Useful discussion on health care beliefs.

Very useful – anatomy of ophthalmology help understand pathophysiology.

Good presentations. VTI good overview. Always enjoy case discussion.

Ophthalmology session very good. Registrar group discussion was good.

Very interesting and useful session.

Eye presentations very good – not too complicated, right amount detail, good idea of about when to refer. Interesting introduction to Tompkins report.

Relevant ophthalmology. Good expression self management – theories and models.
